===========

We're Hiring: Senior Automation Test Engineer – Applications (Web, Mobile & Cloud)

The Location: Bangalore (Work from Office, 5 Days)

Client: Well-known MNC (through Primus Global Technology – 3rd Party Payroll)

Experience: 3–5 Years

Budget: Up to 9–10 LPA

Interview Mode: Virtual

We are looking for a passionate Senior Automation Test Engineer to join our team and lead the design & execution of automation frameworks across web, mobile, cloud, and API testing. If you thrive on solving complex testing challenges, mentoring others, and ensuring high-quality product releases – we'd love to hear from you!

◆ What You'll Do

Build and maintain automation frameworks for web, mobile (iOS/Android), cloud, and REST APIs.

Drive functional, regression, performance, and API testing strategies.

Integrate automated testing into CI/CD pipelines for continuous validation.

Mentor junior engineers and champion best practices in automation.

◆ What We're Looking For

Hands-on expertise with Selenium, Appium, Cypress, Playwright (and similar tools).

Strong skills in API automation (Postman, RestAssured, Karate, etc.).

Performance testing experience with JMeter/LoadRunner/Gatling.

Proficiency in Python, Java, JavaScript, or C#.

Familiarity with cloud testing platforms (BrowserStack, Sauce Labs, AWS Device Farm). Experience with CI/CD tools like Jenkins, GitHub Actions, Azure DevOps.

© Nice to Have

Experience in Agile/Scrum environments.

Strong leadership & communication skills.

If you're passionate about automation, innovation, and delivering high-quality products, we'd love to connect!

Apply now or DM me directly if this role excites you – or feel free to tag someone who might be a great fit.

Apply now :(vnichanametla@primusglobal.com)

Job opening for: — Automation / API Testing (Automotive)

Location: Bangalore (Onsite) | Work mode: Onsite, 5 days/week

Salary: ₹15.00–18.00 LPA | Experience: 6–8 years | Immediate joiners only

We're looking for an experienced Automation / API Testing engineer to join an automotive/infotainment team.

Must-have (screening criteria)

- Based in Bangalore and able to join immediately.
- Experience from Automotive / Manufacturing domain only.
- 2+ years C++ development experience (with exposure to Android HAL / Android framework).
- 1+ years Android application development experience; strong Java skills.
- Solid hands-on with Test Automation for Android-based infotainment systems.
- Familiar with version control (Git) and project tracking (JIRA).

Core responsibilities & profile

- Architect, develop and maintain test frameworks and automation for Android-based infotainment systems.
- Work across Android Framework, HAL, and embedded components; understand Services, Activities, Broadcast Receivers and Content Providers.
- Debugging and problem solving on embedded systems; familiarity with RTOS concepts and hardware interfaces (I2C, SPI, UART, CAN).
- Use CI/CD tools (e.g., Jenkins/GitLab CI) and integrate automated tests into pipelines.
- Mentor junior engineers and collaborate with cross-functional stakeholders.

Qualifications

- Bachelor's / Master's in Electronics / Computer / Computer Science or related field.
- Proficiency in Java, C++, Python.
- Minimum ~5 years in developing test frameworks/automation for Android infotainment (total 6–8 years preferred).
- Strong communication and stakeholder facing skills.

If this matches you (and you're in Bangalore + can join immediately), please DM me with:

We are hiring Hacker - Application Penetration Testing (IN Hacker - Application Penetration

Testing) professionals

Application Security Penetration Testers are cybersecurity professionals who are capable of breaching security systems with an emphasis on web, mobile, thick client, and mainframe applications. These individuals have a significant mathematical, coding, and analytic background. They try to hack into the networks to access information without authorization. The purpose of this is to identify weaknesses in the security systems that are in place and help determine how to improve enterprise information security. In essence, they assess the IT security risk of an organization. A Security Penetration Tester evaluates system security configurations. Evaluates findings and performs root cause analysis. Performs analysis of complex software systems to determine both functionality and intent of software systems. Contributes to the design, development and implementation of countermeasures, system integration, and tools specific to Cyber and Information Operations. Prepare and present technical reports and briefings to Technical and Executive teams. Perform documentation, vetting and weaponization of identified vulnerabilities through reverse engineering. The primary objective of a Security Penetration Tester is to ensure that the computer systems they work with are safe and cannot be accessed without authorization. They need to be aware of new software and hardware that can improve computer security since they play a key role in determining the security needs of clients. When they attempt to hack into the system, they produce reports detailing their attempts and the conclusions they've reached about the effectiveness of the security systems that are in place. They are responsible for the entire lifecycle of these client engagements starting from analyzing the client business and security environment, conducting in depth analysis of problem areas, developing proposals for clients to address these areas incorporating elements of overall IBM Security strategy, pitch the proposals to the client and cascade information to the other teams on recommended countermeasures.

Primary Location: Bangalore (INSUBRAM) Subramanya Arcade, Grd-3rd Flrs No 12 Subramanya Arcade, Grd-3rd Flrs No 12

📮 Hiring Now – QA Engineer (Automation & Manual Tester) 📮

Location: Bengaluru (On-site)

Collaboration Duration: 6 Months

✓ Engagement Type: Immediate Joiners Only
 ■ Experience: 3–6 Years (Min. 4 Years required)

We are looking for a skilled Automation & Manual Tester to join our team and ensure highquality product delivery. The role involves hands-on manual testing, REST API validation, SQL queries, and automation scripting using Pytest integrated with Jenkins pipelines.

Key Responsibilities

Design, develop, and execute manual & automated test cases.

Perform REST API testing (request/response validation, status codes, integration flows).

Write & execute SQL queries to validate data integrity and reporting accuracy.

Develop & maintain automation scripts using Pytest integrated with Jenkins pipelines.

Conduct functional, regression, and feature testing for application stability.

Document test plans, results, and defects, and ensure resolution.

Collaborate with developers, product owners, and QA teams to improve coverage.

Contribute to QA best practices & process improvements.

Required Skills

Strong experience in Manual Testing & Feature Testing

✓ Hands-on expertise in REST API Testing

✓ Proficiency in SQL (complex queries & syntax)

Experience with Pytest & Jenkins for automation & CI/CD

Preferred (Bonus) Skills

- ★ Exposure to Selenium for UI automation
- ☆ Strong analytical & problem-solving abilities
- ** Excellent collaboration & communication skills
- Ability to work independently and in Agile teams
- Interested candidates can apply by reaching out to us at shubham@nucleocoders.com

Calsoft is hiring for Python Automation Networking (SDET) Engineer-

Title: Sr. Software engineer (Python SDET)
Preferred Location - Bengaluru Experience ~ 7 years
Mandatory skills -Strong Python Scripting & Automation
Skill-

- 1. Experience building end to end test automation frameworks using Python (e.g. pytest, Robot Framework) for functional and system-level testing
- 2. Networking Protocol & Domain Expertise Hands on knowledge of L2/L3 networking features (TCP/IP, ICMP, IPv4/IPv6, VRRP, IGMP, VLANs, STP, LLDP), plus control plane protocols (BGP, ISIS) relevant to data center or enterprise routing
- 3. SDET / QA Background Prior experience in QA or SDET roles: test planning, requirement-to-testcase mapping, test case writing, defect logging and tracking
- 4. Linux Platform & Debugging Skills Comfortable working in Linux environments, debugging software issues, profiling automation, and integrating with CI/CD pipelines
- 5. Test Infrastructure & Tools Experience using test tools such as packet generators (IXIA, Spirent), network analyzers, and SDLC tools like Git, Jira, Confluence, qTest. Designing validation topologies and executing at scale.
